

Site Services  

Site Services

Site Services

From initial design to installation and commissioning or routine maintenance, ECS can provide engineers to deliver either individual tasks or complete projects.

ECS offers a complete range of site services which are supported by designers and project managers to ensure that every installation is delivered to the highest standard.

Complete turnkey solutions are available with ECS providing most aspects of a project from in-house, professional, qualified engineers and managing sub-contractors for operations such as contract lifts.

ECS can also provide individual services specifically for:

- Mechanical engineering
- Electrical engineering
- Civil engineering
- Process engineering
- Fabricated metalwork
- Control & Automation

- Emergency maintenance
- Project management
- Certified dive teams
- Pumping station installation / refurbishment
- Archimedes Screw Pump installations / refurbishment

Both the facilities and personnel training schemes have been independently assessed and approved by various professional bodies such as:

ECA (Electrical Contractors Association)

NICEIC (National Inspection Council for Electrical Installation Contracting)

BCSA (British Constructional Steelwork Association)

All projects completed by ECS are supported by in-depth risk assessments and method statements which ensure efficient and safe working practices are constantly maintained; a feature that is borne out by six consecutive gold awards from RoSPA for Occupational Health & Safety.

ECS site engineers have considerable experience and expertise in a wide range of projects and are supported by efficient design and logistics teams.
