

**ECS Water Control specialises in delivering high quality, reliable and cost effective engineering solutions to the water utility and related environment agencies and organisations, we specialise in the design, fabrication and construction of water and environmental processing and management projects.**

ECS offers a full turnkey project managed service for mechanical and electrical installations including managing civils contractors and supplying pipework, fabrication, control and automation work to ensure that every installation is installed and commissioned to the highest standard. Existing clients include the majority of the UK Water Utility companies, Government Agencies and Internal Drainage Boards.

# Weed Screens

# Case Study: 011 Weed Screens

ECS Engineering Services currently operate as a framework contractor to the Environment Agency for the design, manufacture and installation of weed and trash screens. To date over 50 weed screens have been completed for the Agency and various other clients.

Using our complete package of in-house services, we provide a site study, 3D design, manufacture and installation in one seamless, integrated operation.

As part of the package, we can replace, refurbish and upgrade existing infrastructure to provide safe access to the weed screen, including steps in steel, concrete or timber, as required to complement the site's local environment.

We can also provide upgrades and enhancements to limit public access including handrail, barriers or fencing in both timber and steel.

We are experts in making sure that the weed screen is installed safely, providing all the necessary lifting equipment regardless of the site's location.

Screens can also be designed in a modular manner to enable installation in very remote areas.
